Platform.sh for financial services

Build a foundation of trust

As a financial service provider, you build your business on trust. Your clients trust you to protect their assets and their information. They trust you to be open and transparent in managing their money. They trust you to keep your counsel and their accounts accessible around the clock.

Platform.sh gives you a solution to help build your foundation of trust. We provide the end-to-end platform you need to build a foundation of security, transparency, and availability into your websites and web applications. Compliance by design, repeatable and auditable processes, and high-availability architectures—all in one package.

Repeatable and auditable processes

- **Effortless updates**
  Source Operations™ automates updates and patches to your websites and applications.

- **Permissions and access**
  We provide granular access to your environments and management console. And we use PKI and two-factor authentication to keep that access secure and simple.

- **Data protection**
  Platform.sh encrypts your data at all stages—in rest or in transit, in development or in production. And runtime is read-only to limit attack surface.

- **Secure stack management**
  We deliver security patches automatically and around the clock to all your infrastructure components. This frees up your team to create value for your customers.

- **Data residency**
  Run your applications around the world while staying in compliance with all applicable data protection laws.

- **Repeatable and auditable processes**
  Website and application development is only secure when it’s repeatable and auditable. Platform.sh logs every change to your product code. And you can make and test these changes in cloned environments that are isolated from the original environment. This limits human errors while giving you the power to track and document every change.

High availability architectures

- **Triple redundancy**
  A 99.99% uptime with N+1 architecture assures seamless upgrades and zero outages.

- **Scale up and out**
  Platform.sh scales to your workload whether you’re facing millions of requests per hour or managing thousands of sites.

- **Enterprise support and technical account management**
  The Platform.sh team has your back 24/7, with globally distributed support and dedicated Technical Account Managers.

Contact us today to learn more about how Platform.sh can help you strengthen your financial services’ foundation of trust.
